Module Catalog - Product API

Resource for the assigned Catalog team | Demo version 1.0

Scope

Expose categories, product search and product details. Keep product records separate from identity and payment data.

API contract

GET /products supports category and text search. GET /products/{id} returns a public description, display price and availability.

Acceptance checks

Return an empty page when no products match. Archived products must not appear in public search. Validate identifiers before accessing product administration data.
