E-Commerce Hub - Git Guideline

Shared master resource | *Demo version 1.0*

Branches and commits

Create a feature branch for each change. Write a short commit message that describes the resulting behavior. Open a pull request when the change can be reviewed.

Code review

Include the user story, expected behavior and verification steps. Keep changes inside the assigned module. Discuss shared API contract changes with the coordinating team.

Before integration

Run relevant checks, update the API contract and confirm that no credentials or private uploaded files are included in the change.
